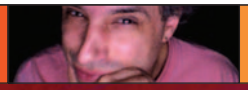
Planet Waves Almanac by Eric Francis June 2006 UT

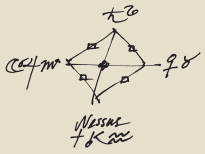


Summer Squared

Let's just hope you have a square shaped picnic basket. And to make it easier on yourself remember square items pack efficiently in square containers. Toss in that nice square picnic blanket. Remember all those fixed grand squares just waiting to happen? Well they're happening, and we have two this month. Mars and Saturn don't just conjunct out of idle pleasure; they turn the wheel the fate. This is an Aries point moment: it's a solstice AND the north node is making its grand exit away from 0° Aries. Plots can range from the portentous to the foreboding — plenty to discuss on the Gemini / Cancer checkerboard there will be. At month's end, we may be fluttering from blanket to blanket once Venus goes into Gemini and the sun nurtures us in Cancer.

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	SATURDAY	SUNDAY

JUNE BEGINS *with Mercury entering Cancer and Mars entering Leo on the third. Juno enters Leo on the 5th. Mercury's shadow begins on the 17th at 21° of Cancer. Uranus stations retrograde on the 19th at 14° Pisces. Over the weekend before the Summer Solstice, Jupiter T-squares Mars, Saturn and Vesta conjuncting at 8 degrees Leo which oppose Chiron at eight degrees of Aquarius. The north node moves into Pisces on the 22nd. Venus goes into Gemini on the 23rd and Mercury goes into Leo on the 28th.*



A fixed grand crosses configures on the 7th - 8th of June. Moon and Jupiter in Scorpio oppose Venus in Taurus; Nessus and Chiron in Aquarius oppose Saturn in Leo. A Taurus moon re-activates the grand cross again on the solstice.
