

Capricorn Studio 2024+ Notes

Hello Capricorn!

This is an astrological chronology, mostly of events in your sign or rising sign, going back 40 years. It accompanies your Cap Studio reading; I go over the dates in the video.

These events either happened in Capricorn; or involved Saturn, your ruling planet; or took place on the cardinal cross (in the case of transits, such as Saturn through Aries and Chiron through Libra).

There is a way to do this that is customized to your chart, however, many people are sensitive to transits by sign and mutual aspects (such as Saturn opposite Pluto). It will be fairly clear what is what from the text, though if you have a question, bang it into the comments.

The way to work with these is to print this document, and take notes on the dates involved, starting with your address at the time. Then slowly assemble a kind of astrobiography that will help you see where your life fits planetary events and important events in the world.

Between 1984 and 1998, Neptune passed through Capricorn. This dates back to before some of my readers were born. There was a Jupiter-Neptune conjunction on Jan. 19, 1984.

On Feb. 25, 1986, Saturn makes its first opposition to Chiron, Sagittarius to Gemini. This opposition holds for 20 years, through June 2006.

Between 1988 and 1996, Uranus passed through Capricorn.

In early 1988 there were a series of Saturn-Uranus conjunctions in late Sagittarius.

Between late 1988 and 1991, Saturn passed through Capricorn. In these same years, Chiron passed through Cancer.

In autumn 1989, there was an astounding quad conjunction of Uranus, Venus, Saturn and Neptune, opposed by Ceres, Chiron and Jupiter in Cancer.

In 1993, there were a series of world-altering, generational conjunctions in Capricorn, centered around Uranus conjunct Neptune (itself an extremely rare aspect — the next one happens in 2165).

Saturn entered Aries on April 7, 1996. Through 1998.

Chiron in Libra, 1995-1996

In January 1997 there was a grand conjunction in Capricorn — Venus, Pallas, Mercury, Sun, Ceres, Moon, Neptune and Jupiter.

Between 1999 and 2005, Nessus was in Capricorn.

Between 2001 and 2002, Saturn and Pluto were at opposition. While this did not take place in Capricorn, it involved your ruling planet. And the opposition eventually moved into a conjunction in Capricorn.

Saturn entered Cancer on June 3, 2003. Through c. 2005.

Between late 2001 and 2005, Chiron passed through Capricorn. This was an especially important time because it revealed to you many of the scenarios and situations you would be addressing during Pluto in Capricorn (2008-2024). You will learn a lot going back and reviewing the events of '01 through '05.

Between June 24, 2011 and March 16, 2015, Uranus squared Pluto from Aries to Capricorn. This happened seven times — an unusual pattern that stretched the effect over five years.

Another stand-out event was the Saturn-Pluto conjunction of January 2020. While this was followed by a world crisis, this aspect had personal meaning to you — and it's probable that what you were going through personally at that time was overshadowed by world events that began to unfold two months later.

What was that about? What were you ready for or emerging from at that time that was eclipsed by the 2020 crisis?
